

Ashlie Jireh S. Caro

BSIT-3D

GITHUB DOCUMENTATION

My way of creating/uploading my laboratory activities to GitHub, is to create first a new repository for each activity but first rename the file as WS101-Lab#-D-CARO then use Git commands like "git init" to initialize the repository, "git add ." to add your files, "git commit -m" to commit with a message, and "git push" to upload to GitHub. Finally, share the links to your repositories.
